Summary

Highly skilled Full Stack Developer with 4.5 years of industrial experience, currently working at eSquall LLC. I specialize in building scalable, responsive web applications using React.js and Next.js on the frontend, and Node.js, Next.js, MongoDB, MySQL, and PostgreSQL on the backend. With a strong focus on API integration, AI integration, and performance optimization, I am committed to contributing to the tech industry by embracing new challenges and continuously seeking opportunities for professional growth.

Education

Bachelors in Computer Science	Foundation University Rawalpindi Campus	2018 - 2022
-------------------------------	---	-------------

Experience:

Full Stack Developer eSquall LLC Rawalpindi, Pakistan	May 2025 - Present
--	--------------------

- Designed, developed, and maintained robust front-end user interface components using Material UI, PrimeReact, Shadcn and Tailwind CSS.
- Integrated REST APIs using Axios and RTK Query, along with AI integrations.
- Worked with Redux, Redux Toolkit, and RTK Query for state management.
- Developed backend and full-stack features using Node.js and Next.js with databases such as MongoDB, MySQL, and PostgreSQL.
- Utilized Git, GitHub, GitLab, Heroku, Vercel and AWS for version control and deployment.

MERN Developer App In Snap Islamabad, Pakistan	Aug 2022 - April 2025
---	-----------------------

- Design, develop and maintained robust front-end user interface components
- Analyze complex systems specifications of existing programs to determine requirements
- Proactively identify problems and present/develop solutions.
- Integration of REST APIs using fetch and Axios, as well as hardware integration
- Worked with Redux and Redux Toolkit
- Worked on Node.js with Express Framework, MongoDB and JSON web-token authentication.
- Worked with Git, GitHub, and Microsoft Azure for deployment

Full Stack Developer | Freelance | Remote

Dec 2022 - Present

- As a Freelancer, I completed multiple projects in React and Node with MongoDB. I'm skilled in adapting to client needs, managing timelines, and delivering high-quality, scalable solutions

Skills:

Frontend:

HTML5, CSS3 / SCSS, Tailwind CSS, JavaScript (ES6+), TypeScript, React.js, Next.js, Redux, Redux Toolkit, API Integration (Fetch / Axios), UI Libraries

Database:

MongoDB, PostgreSQL, MySQL, Supabase

Deployment

Microsoft Azure, AWS, Heroku, Netlify, Vercel

Backend:

Node.js (Express.js), Nest.js, Socket.io, JWT Authentication, Cron Jobs, FCM Token, Generative AI & AI Agent Development, Payment Gateway, Hardware Integration

Tools & Version Control:

Git, GitHub, GitLab, Firebase

Projects:

Leadelta

Developed an AI-powered platform Leadelta with Admin and Client portals to automate customer interactions and lead management. Implemented Voice, SMS, and Inbound/Outbound agents for seamless communication using Vapi AI via Twilio. Provided full control for users to configure and manage agent settings as per their needs. Built continuous learning features to improve agent performance over time. Enabled automated booking through AI agents. Integrated HubSpot CRM for lead generation and implemented workflow automation.

PrmAi

PRM AI is a premium chauffeur booking and management system used by its clients to handle transportation services efficiently. Bookings can be created manually by staff, submitted through Google Forms, received via text messages, or processed through email. The platform also includes a dedicated driver mobile application that provides real-time tracking, trip management, and driver-related operations.

[Live Link](#)

ZiggleBee

Developed ZiggleBee, an accessibility-focused platform for disabled users with Admin and Owner portals. Implemented subscription-based plans with Stripe integration for automated payments and feature access control. Built a template builder system to create accessible content. The platform enables users to manage subscriptions, features, and settings

with ease while ensuring an inclusive experience.

[Live Link](#)

Adfy

A real estate management platform designed for agents, customers, and dealers to streamline property transactions and document management. The system securely stores agreements and other legal documents, while AI-powered analysis helps identify missing information, compliance issues, and potential legal risks. It also includes a configurable workflow builder that automates approval processes, task management, and document review throughout the transaction lifecycle.

Warehouse MS

Developed a product based warehouse management system for Finland, also used as a product, where dynamic modules, permissions, inventory, assets, and RFID labeling are managed. This system also integrates hardware for RFID scanners.

[Live Link](#)

Playli

Playli is a digital platform designed to connect people through real-world sports. It allows users to find nearby players, join open games, or create their own sports activities. The main purpose of Playli is to bring everyday athletes together, making it easier to organize games and build a local sports community. The platform facilitates connections between players but does not manage or control the events themselves.

[Live Link](#)

HomeSuite

HomeSuite is a real estate platform that allows users to buy, sell, or rent properties without commission. It features property listings, advanced search filters, and location-based recommendations. The platform also integrates services like buyers, contractors, mortgages, and insurance to provide a complete home journey in one place.

[Live Link](#)

Mariachify

A Mexican-based project that uses AI to generate personalized greeting videos and other custom content for users. The system handles user requests, content generation, and delivery through an intuitive admin and client interface.

[Live Link](#)

UltraMarble

A job-driven workflow where work orders are created and customized for marble and related products. The system builds full visualizations with dimensions and product features, renders marble layouts, and assigns tasks to team staff.
